

CABLE CLEATS

LOCOMOTIVE AND PASSENGER CARS

Molded &
Fabricated
Cleats

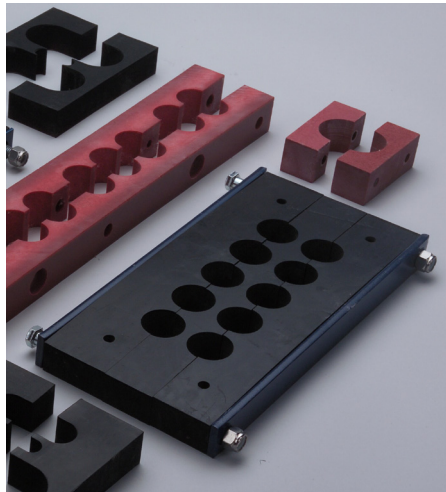

Rubber

Wood

GPO3

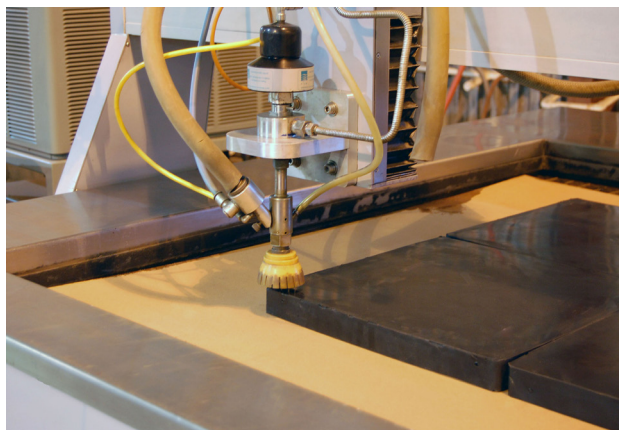

Fabricated Cleats

- Preferred process for production of small quantities.
- Water-jet cut from pre-molded slabs in standard thicknesses
- Require CNC program, minor tooling

Molded Cleats

- Preferred process for production of large quantities.
- Provide high level of detail at lower cost
- Require sufficient lead time for engineering and tooling

With our CNC waterjet cutters we are able to computer program cable cleats, then precision cut an entire sheet of material. The waterjet ensures every part will come out the same as the rest. Engineering changes are a breeze as well - no new tooling - just a quick program change and we are back in production.
